[COMPANY] is Rev5-ready, and 20x is the faster way in

Jun 11, 2027

New Rev5 applications close for good

THE TWO PATHS COMPARED

DIMENSION	Rev5 Moderate	FedRAMP 20x
Speed to ATO	Typically 12–18 months to authorization	Class C certification within 2–3 months
Agency sponsor	A sponsoring agency is required before you can start	Program Certification removes the sponsor requirement
Cost to authorize	Roughly \$500K–\$1.5M in program cost	Roughly \$100K–\$300K to certify
Longevity	New applications close June 11, 2027, and the path winds down	The durable path for new certifications from here forward

Rev5 readiness is the fastest possible start on a 20x certification

Why [COMPANY], why now

What a 20x Class C (Moderate) certification asks for, why the window matters, and how [COMPANY] gets there from the Rev5 readiness it already has.

THE CASE IN FOUR PARTS

Who is [COMPANY]?

- [COMPANY] is a [COMPANY DESCRIPTOR] selling to [BUYER], at [STAGE].
- Current baseline to build on: [SOC 2 / ISO 27001], with [AGENCY DEMAND] pulling them in.
- Rev5 readiness already underway for [OFFERING], the system in scope for certification.

FedRAMP 20x creates a major new opportunity

- Class C certification in 2–3 months, against 12–18 for Rev5 Moderate.
- Roughly \$100K–\$300K to certify, against \$500K–\$1.5M.
- Automated validation and machine-readable evidence replace most of the documentation burden, putting federal authorization within reach for far more providers.

Why act now?

- June 11, 2027: new Rev5 applications close, and 20x becomes the only path to a first certification.
- First movers win the category: agencies buy from vendors already listed, before competitors arrive.

Why Boundera?

- Assessment-ready in four weeks: Boundera turns existing Rev5 readiness into validated KSI evidence.
- AI-assisted remediation drafts fixes for failing KSIs and revalidates them.
- Continuously collects evidence and produces the necessary machine-readable packages.
